Celebrating Health

We have just celebrated the World Health Day last Saturday, the 7th of April 2018. Following the WHO motto "Health for All", and "Universal Health Coverage: **Everyone, Everywhere**", the Global Health Network contacted various members of the network from around the globe, and invited them to share their views and knowledge about what it takes to do health research in low-and middle-income countries, and how health can become an universal health service.

From raising awareness about the importance and implications of using high bioethics standards in clinical research in Honduras, to fighting pneumonia in India, these researchers share their experience and stories about what it takes to improve health services, and make it available for everyone.

We will release a video per day during this week about different topics associated to health research globally.

Day 1: Investigación ética y de calidad by Dra Jackeline Alger (In Spanish - English subtitles coming soon).

Day 1: Investigación ética y de calidad by Dra Jackeline Alger (In Spanish - English subtitles coming soon).

Investigación ética y de calidad: El papel del asesor de trabajos de investigación

Jackeline Alger, MD, PhD
Unidad de Investigación Científica (UIC)
Facultad de Ciencias Médicas
Universidad Nacional Autónoma de Honduras

ABRIL 2018

27:12

Day 2: Investigación y bioética: dos caminos complementarios by Dra Astarte Alegria and Dra Eleonora Espinoza (In Spanish - English subtitles coming soon).

Dra. Astarte Alegria Dra. Eleonora Espinoza

INVESTIGACIÓN Y BIOÉTICA: DOS CAMINOS COMPLEMENTARIOS

- La educación en Ética de la Investigación con Seres Humanos comprende por lo menos cinco criterios para la acción que deben ser tenidos en cuenta (Díaz, 2005)
 1. Convenios, códigos y declaraciones internacionales
 2. Normas y legislaciones nacionales y locales
 - 3. Comités de ética de la investigación**
 4. Consentimiento informado
 5. Virtud de los investigadores
